Agent module for spherovision360

The Agent module is designed for spherovision360's agent, the functions in it is the following:
1. integrate agent info in the checkout process and store them into the order record,the administrator can check them in the order detail page from vm back-end.
2. auto-create purchase order pdf file and send to the administrator of spherovision360.

There will be two packages, one is joomla standard componet, the other is vm patch, you can install it in the vm backend, so after you purchase it in my website, you need to send a email here : joomvm@gmail.com, tell me your domain name/virtuemart version,Â then I will send you the package asap and help you to install it.

attention: if you are useing a custom vm theme, I need to customize a new vm patch for you, and the customize charge is +40usd(you can choose the "custom" option in the product detail page for AgentMod).
